#### **Cryopreservation – LEC, LEA, Copenhagen, and WIAR**

Posted November 27, 2016

We have decided to discontinue the breeding of LEC rat, LEA rat, Copenhagen rat, and WIAR rat in living bodies, because these strains have been barely used these days.

However, we will cryopreserve embryo and sperm by the end of March, 2017. When you need these strains, please contact us. We apologize for your inconvenience and appreciate for your understanding in advance.

Ryoji Hokao, Ph.D.

President, Institute for Animal Reproduction
